

So you've bought Snow Job, and you wanna shoot a fat load all over your car. Well, you'll need to follow these steps:

- Set up your pressure washer and connect power to it, but don't turn it on yet!
- For the thickest and most luxurious load possible, turn the knob towards the “-” symbol.
- Fill your bottle with 900ml of water, then top it to 1000ml with Snow Job formula (100ml of Snow Job)
- Attach the hose to your pressure washer and turn it on.
- Squeeze the trigger of your pressure washer till the load starts coming out.
- Adjust the end nozzle till your desired load blowing arc is reached.
- Cover the whole car in a nice, thick load, starting at the top and working down to the bottom of the car. – sit back and enjoy your handiwork.
- Let the load dwell for around 1-2 minutes, or until you see it start to thin out like John Howards hair.
- Put your normal pressure washer nozzle on, then pressure wash down the whole car, again starting from the top and working to the bottom.

That's it! Now you can begin washing.
